

BRAND GUIDE • VERSION 1

Coloring Dictionary

A dictionary you can color.

Color • Learn • Grow

Standalone publishing brand
coloringdictionary.com

October 7, 2026

01 / The idea

Coloring Dictionary pairs a readable explanation and colored example with a facing illustration to color. The first collection explores flower meanings. The format can extend to other subjects and languages.

Promise

Discover something. Understand it. Make it your own through color.

Personality

Curious, warm, clear and dependable. Friendly enough for children; thoughtful enough for adults.

Brand architecture

Brand: Coloring Dictionary

Subject: Flower Meanings

Collection identifier: Volume One, Texas, Christmas

Language: identify each translated edition clearly.

These collection identifiers describe current concepts. Future subjects and translations are expansion plans, not released products. No Terry List attribution is required. Legal entity and author credit remain undecided.

02 / Logo system

- Use the stacked wordmark for covers, website headers and marketing. Use the partially colored C for profile images, app icons and browser tabs.
- Light surfaces: teal and gold. Dark surfaces: cream and gold. Keep the golden detail in the same position.
- Leave clear space equal to at least one quarter of the initial C's height around the logo. Keep its proportions; do not stretch or rearrange letters.
- Starting digital minimum: 180 px wide for the wordmark. Below that, prefer the C symbol. Inspect actual exports at their display size.
- Keep LLC or Inc. for legal business details after entity formation. The public wordmark remains Coloring Dictionary.

Current logos are raster concepts. The dark wordmark pictured here has a solid background. Transparent dark exports need edge cleanup before production; inspect alpha rather than assuming black in a preview means an opaque background. A clean vector master and favicon-size checks remain to be completed.

03 / Working color palette

These are proposed production values based on the visual direction. Generated art may contain shade variations; these hex values define future consistent digital use.

Deep teal #00505A	Night teal #082F35	Warm cream #FFF5DB	Coloring gold #FFC629	Reading ink #202A2D
----------------------	-----------------------	-----------------------	--------------------------	------------------------

Use white interiors for coloring. Teal carries headings and brand recognition; cream supports message boxes; gold is an accent. Use dark text for reading copy. Reserve botanical colors for examples and subject artwork.

04 / Typography

Role	Direction	Rule
Wordmark	Custom rounded chunky lettering	Use the artwork; no exact font match has been identified.
Display headings	Heavy rounded sans serif	Keep subject names legible and avoid squeezing long titles.
Body copy	Readable rounded sans serif	Proposed family: Nunito Sans; confirm font files, license and language coverage before final adoption. System sans serif is the fallback used in this guide.
Botanical names	Italic reading face	Preserve spelling, capitalization and diacritics.

Starting print targets: body copy 14–16 pt; example labels 13–15 pt. Check at actual printed size. Marketing headlines should stay readable on a phone without enlarging the image.

05 / The signature spread

Generated concept mockup using existing draft pages. It is not a photograph of a printed proof or a final KDP interior.

Left / Learn

Entry name, botanical identity where relevant, verified meaning or definition, simple explanation, concise facts, and labeled colored examples.

Right / Color

Recognizable illustration, bold black outlines, generous coloring spaces, entry name and a short message. Keep the artwork dominant.

Natural colors are a guide. Your colors are your choice.

For the English print edition, keep the guide on the even-numbered left page and coloring on the odd-numbered right page. Export separate interior pages. Adapt the physical placement thoughtfully for right-to-left editions.

06 / Covers and collections

Keep the large stacked brand title in a consistent position, with the subject on the ribbon and collection identifier below it. Subject imagery forms the border. Maintain strong thumbnail readability and clear separation between the brand, subject and collection.

Flower covers can feature flowers; future animal or space covers use their own subject imagery. The permanent logo remains free of subject-specific decorations. Use “For All Ages” only when the actual content supports that positioning.

The author/contributor field, publisher identity and full cover metadata must be resolved consistently before publication. A brand decision alone does not settle those fields.

07 / Voice and ready-to-use copy

A dictionary you can color.

Short description

Explore a subject through clear explanations, colored examples and illustrations you make your own.

Flower collection description

Discover the meanings people have given flowers. Explore a colored guide, then bring the facing flower illustration to life in your own colors.

Profile bio

A dictionary you can color. Explore flower meanings through facts, color guides and creative pages. Color • Learn • Grow.

Launch-preview caption

Meet Coloring Dictionary. A colored guide on the left. A page to make your own on the right. Our first collection explores flower meanings. Follow along as we build Volume One.

Use direct, concrete language. Keep adaptations separate from quoted historical meanings. Describe folklore as folklore. Support facts with sources. Avoid claims of guaranteed learning benefits, bestseller status or being the first without evidence.

08 / Languages

Carry the palette, rounded typography and partially colored C across language editions. Decide whether each market keeps the English brand with a localized descriptor or receives a translated wordmark. Treat that choice as pending.

Translate definitions, labels, instructions and promotional copy together. Preserve scientific names. Have a fluent editor review natural phrasing and the meanings described; flower symbolism may vary culturally. Allow longer labels to wrap instead of shrinking them. Do not present Spanish or other editions as available until produced.

09 / Marketing standard

Asset	Focus
Open-book preview	Show the left-guide/right-color relationship immediately. Use a polished spread and identify concept imagery where relevant.
Meaning reveal	One flower, its documented meaning, then its spread.
Color demonstration	Natural example beside a reader's creative interpretation.
Book introduction	Subject, intended audience, sample content and actual availability.

Use coloringdictionary.com consistently. During production, invite readers to follow progress or join a real signup form. Use purchase calls to action only when a book is available.

10 / Production handoff

Version 1 establishes the working brand direction; palette values, font selection and minimum sizes are proposed standards for review. The book preview demonstrates the format using draft clover pages.

- Next: clean vector wordmark and matching C masters; test dark/light icons at small sizes.
- Finalize typography and three print-quality sample spreads.
- Build the mobile landing page and connect the domain when authorized.
- Resolve legal entity, publishing credits and book metadata before release.

Preview generation: built-in image generation; prompt used the existing clover reference and coloring pages in a near-overhead open paperback on cream, guide left/coloring right, with no added claims or props. Review source pages for precise wording; mockups are marketing concepts.
